

Announcing...

KetoCal[®]

3:1

December 4, 2007

Dear Healthcare Provider,

On behalf of Nutricia North America, I am pleased to announce the availability of the latest medical food for implementing the ketogenic diet: **Ketocal 3:1**.

KetoCal 3:1 is the only nutritionally complete 3:1 formulation uniquely designed for children up to 8 years old. And just like KetoCal 4:1, the formula makes implementation of the ketogenic diet – a somewhat daunting task – more manageable.

As a nutritionally complete formula, KetoCal 3:1 is ideal for both tube feeding and as a meal replacement. And with creative recipes, parents can also use it to create tasty ketogenic meals for their children. The formula has already been entered into the KetoCalculator database, making it easy for you to plan meals and menus for your patients.

Each case of KetoCal 3:1 contains 6 cans with 300 grams of formula in each can.

Managing the ketogenic diet is not easy – for the patient, the parent or the healthcare provider. With KetoCal 3:1, Nutricia hopes to make the diet a little more manageable for you, your patients and their families.

Please refer to the attached KetoCal 3:1 resource for more detailed nutritional information.

For samples, please feel free to contact your sales representative or a nutrition specialist at 1-800-365-7354.

Sincerely,

Susan Gingrich
KetoCal Product Manager, Nutricia North America
